

MOHAMMED FAIZ MOHAMMED IQBAL

Dubai, United Arab Emirates | +971561395828 | mohdfaiziqbal.work@gmail.com
[linkedin.com/in/faiziqbal/](https://www.linkedin.com/in/faiziqbal/) | Projects: github.com/Faiz-Iqbal | UAE Golden Visa Holder | UAE Driving License

EDUCATION

Heriot-Watt University - BSc Computer Science & Artificial Intelligence (<i>First Class Honours</i>)	2021-2025
Heriot-Watt University - DEP Engineering/Computing	2020-2021
Cambridge International School, Dubai - High School, CAIE IGCSE, As/A Levels	2007-2020

TECHNICAL EXPERIENCE

Development/Programming | Python, R, Java, C, Node.js, SQL (MySQL, MongoDB, Firestore), Firebase, Raspberry Pi
Data Science | Predictive Modeling, Supervised & Unsupervised Learning, Feature Engineering, Statistical Analysis
AI & NLP | Sentiment Analysis, Embedding Models, Data pipelines, Prompt engineering, RAG, Semantic search
Data Analytics | Pandas, NumPy, Jupyter Notebook, Excel, Matplotlib, Seaborn, EDA, Visualization, Hypothesis testing
Deployment & Tools | Git/GitHub, Docker, CI/CD (GitHub Actions), Pytest, JUnit, VS Code, APIs
Other Tools | Front-End (HTML, CSS, JavaScript, React), Figma, Blender, Unreal Engine

PROJECTS

Deriv AI Talent Sprint - Autonomous AI Agents (lablab.ai) | 2026

Built and deployed a serverless Google ADK agent that autonomously generates HR onboarding documents by reasoning over employee data and executing multi-step workflows via FastAPI and Cloud Run.

Sentiment Analysis of E-commerce Reviews (Amazon)

Built a machine learning model to analyze Amazon product reviews and classify customer sentiment. Used Python, scikit-learn, and NLTK with TF-IDF, n-grams, and supervised NLP classifiers.

Predictive Modeling of Coffee Quality Using Machine Learning

Built a predictive model to classify coffee quality grades from sensory and physical data, supporting quality control and grading consistency. Used Python and scikit-learn with EDA, clustering, feature engineering, and cross-validation.

Reinforcement Learning and MDP-Based Planning Agents

Developed intelligent agents using Value Iteration, Policy Iteration, and Q-Learning to learn optimal strategies in a simulated Tic-Tac-Toe environment. Implemented in Java with custom reward modeling and policy extraction.

Inspirely: Full-Stack Collaboration Platform

Co-developed a scalable collaboration platform using React, Node.js, and Firebase with real-time chat, video, and task management. Delivered via Agile (SCRUM) methodology in a team-based setting.

EXPERIENCE

Co-Founder | Early-Stage Startups (FoodTech & AI/SaaS) December 1st 2025 - Present

Self Employed

- Collaborated on building and refining two startup concepts from the idea stage.
- Researched the market and spoke with potential customers and businesses to gather feedback and assess feasibility.

Workspace Business Expert (Tech) September 1st 2025 - November 30th 2025

WiseApp

- Found new leads, delivered product demos, and aligned WiseApp automation solutions with client workflows.
- Tested new features with presales and prepared requirements/compliance documents for client deployments.

Teaching Assistant January 1st 2025 - April 15th 2025

Heriot-Watt University

- Helped students with Web Design, Databases, and Computer Systems, guiding exercises and simplifying coding concepts (HTML/CSS, SQL, assembler, Linux).
- Hosted live demos, resolved coding issues, and provided feedback on lab assessments with faculty

Business Intelligence & IT Intern June 1st 2023 - July 30th 2023

WiseApp

- Assisted with client visits, data analysis, and market research to support business insights and project evaluation.
- Performed system testing, troubleshooting, and technical support to maintain software and hardware performance.
